Product Description

Flomary Mouldings architectural mouldings featuresare madefromahigh-densitypolystyrene (EPS) foundation that is strengthened with premium fiberglass mesh and finished with Flomary Special Polymer Modified Cement Coating. The resulting product is of high quality, long-lasting, and cost-effective. It performs well in all weather conditions, remaining unaffected by rain, humidity, or drastic temperature fluctuations. It does not shrink, expand, or decay, and requires minimal maintenance once installed correctly. While Flomary products are perfect for outdoor use, they can also serve as an effective option for interior design projects.

DESIGN FLEXIBILITY

Our catalog features a diverse range of profiles and other decorative elements. Besides the details shown in this catalog, we have an extensive selection of profiles that can be produced without additional setup costs. Simultaneously, we are dedicated to innovating new concepts based on our customers' needs. No matter the production quantities, we can adjust our shapes and develop new ones while keeping prices competitive. The majority of our profiles can be provided in curved or arched forms to meet the design specifications of the project.

GENERAL PRODUCT SPECIFICATIONS

Mouldings and Architectural Details produced by Flomary Group are made from an EPS base that is strengthened with a fibreglass mesh and finished with a “Flomary Blend” coating, where:

EPS Core
Expanded Polystyrene - Type 2 (code listed with CCMC 12425-L and meets the requirements of CAN ULC S701.1, Type 2)

Fibre-Glass Mesh
Balanced, open weave fibre glass fabric, compatible with “Flomary Blend” coating.

Flomary Polymer Modified Coating
Light weight acrylic-based polymer modified cement material. (CCMC **Approved**)

Product Description

1. High-Density (EPS) Styrofoam

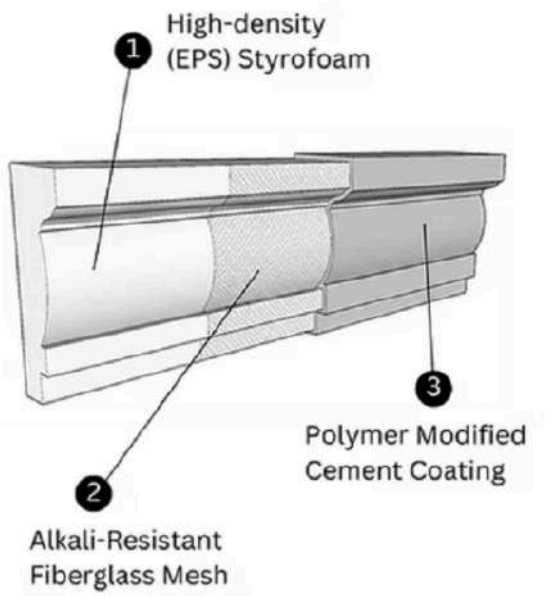
Regarding Styrofoam, it is worth noting that its recycled variant tends to deteriorate and disintegrate more rapidly. Consequently, employing these recycled materials for moldings is not advisable since they are expected to endure on your external walls for several forthcoming decades. This explains why we opt to obtain our Styrofoam from a globally recognized leader in the production of EPS. This company boasts a worldwide reputation for crafting high-quality Expanded Polystyrene.

2. Alkali-Resistant Fiberglass Mesh

Fiberglass mesh of ordinary quality tends to break down, even to the point of complete disintegration over time due to continuous exposure to alkali found in all cement products. However, Flomary Mouldings employs a fiberglass mesh that has been specially treated with an alkali-resistant compound. This ensures its intended advantages are preserved for the entire lifespan of the item it's used in. The role of this fiberglass mesh is primarily for fortification purposes; it reinforces the cementitious coating and provides a lath beneath said coating. This underlying support helps retain the integrity of the coating.

3. Polymer Modified Cement Coating

Undoubtedly, the ultimate appearance holds utmost significance for you, and keeping this in mind, Flomary has undertaken exhaustive steps to guarantee that the coating endures as long as feasibly achievable. Post the application of the fiberglass mesh, we arrange the moldings on a production line that moves the item through an extrusion machine before it's placed on a drying rack within a temperature-regulated space to undergo curing.



Product Description

Our architectural details are suitable for both exterior and interior use

Our mouldings and architectural details are secured to the main structure using adhesive and/or a mechanical fastening system, depending on the substrate, the dimensions of the elements, and the method of application.

Adhesive and mechanical fastening systems rely on the installation instructions published by the manufacturer.

When applied in outdoor settings, our mouldings and architectural features must be coated with a product appropriate for exterior use, following the Manufacturer's published guidelines.

Available Finish

PAINT-GRADE
Our typical finishing grade. This coating has an average minimum thickness of 1/200 and is very durable.

Manufactured by:
Flomary Group.
Xijiagou, Daying Industrial Park, Suining, Sichuan, China
info@flomary.cn

Product Typical Applications

Flomary Mouldings and architectural accents offer versatile applications and can be seamlessly integrated with nearly any wall finishing material. Whether for new constructions or renovation projects, these products provide an effortless installation experience, comparable to wood or polyurethane. For the best results and long-lasting satisfaction, simply follow our installation guidelines.
